

## 5.13 Iteration Plan for Sprint 3

### Written By Fahim Arsad Nafis

- There is very little scope of pair programming. There are only about 5 hours extra available in the sprint which may cause the absence of pair programming. Story point should be decreased in order to increase pair programming.
- Unit test & Acceptance Test appears after writing source code in the list. It will cause a problem. In order to increase validity, Unit test & Acceptance Test must be done first before starting writing source code.
- Writing user manual along with the development process is an excellent idea to execute.
